

WORK EXPERIENCE

<div>Qure.AI</div> <div>Senior AI Scientist</div> <div> Apr 2024 - Present</div> <div>AI Scientist</div> <div> Jul'22 - Mar'24  1 year 9 months</div> <div>AI Scientist Intern</div> <div> Jul 2021 - Jun 2022  1 year</div>	<ul style="list-style-type: none"><li>Scaled stroke-triage and lung-cancer products from R&amp;D to FDA-cleared deployments in 10+ countries<ul style="list-style-type: none"><li>Led the <b>Stroke &amp; Trauma Intelligence (qER)</b> program from <b>novice hire to R&amp;D lead</b>, spanning triage models (<b>AUC 0.85–0.98, DSC 0.30–0.95, ↓ 36% MAE</b>) to published treatment recommendation systems, built on <b>140k</b> weakly annotated datapoints and <b>10k</b> radiologist-labeled scans, increasing patient referrals to specialized treatment centers by <b>~30%</b> (estimated).</li><li>Transplanted the toolkit to the <b>Lung Cancer AI platform (qCT)</b>: raised AUCs (<b>specificity ↑ 0.1-0.2 @ same sensitivity</b>) on <b>22k</b> pulmonary nodules, built a ranking engine (<b>NDCG@5 0.92</b>), prototyped DETR with custom 3D mAP/mAR metrics. Currently supervising three scientists and three data engineers while leading research into multimodal malignancy scoring (CT, PET, biopsy, reports, EHR).</li></ul></li><li>Built future-facing research assets: a <b>CT-native foundation encoder</b> (SwinV2-3D/MaxViT + Sim-MIM + MedCLIP) with memory-aware training that boosts downstream qER models (<b>AUC +0.02, DSC +0.07</b>); physics-grounded synthesis that expanded scarce cohorts by <b>80%</b>; a hierarchical NVAE (<b>SSIM 0.96/PSNR 36</b>) feeding latent diffusion studies; and the '<b>vision_architectures</b>' library that standardizes 3D backbones with activation-checkpointing toggles, tensor-splitting parallelism, EMA students, diffusion schedulers, etc., adopted by CT R&amp;D.</li><li>Collaborated with the regulatory, product, and clinical research teams: led the fastest <b>FDA 510(k) (3.5 months)</b>, fronted CE/MDR/MDSAP filings, co-authored papers/conference proceedings across qER and qCT pathways, hold U.S./India patents, and won the <b>\$100K</b> JnJ Japan Quick-Fire grant.</li><li>Ran <b>data, tooling, and production</b> infrastructure: governed 30+ TB multimodal datasets with Postgres/Mongo lineage, safetensor caching (↓ <b>80%</b> access latency), NLP/LLM report parsing and annotation automation, that drove a <b>3x</b> normalized annotation-throughput gain; architected a custom process-graph pipeline with TorchScript and nested Pydantic configs, <b>&gt;2k</b> pytest cases (coverage <b>22%→91%</b>), cut turnaround <b>57%</b>, slashed integration from <b>8 to 1</b> day, and eliminated config-driven incidents across on-prem/cloud/hybrid deployments.</li></ul>
<div>ReeBorn TotalHealth</div> <div>Co-founder</div> <div> Aug 2021 - Jun 2022  11 months</div>	<ul style="list-style-type: none"><li>Reversed chronic illnesses such as diabetes, hypertension and obesity using artificial intelligence</li><li>Leveraged data collected from wearables and other devices, the current lifestyle of the customer, and preferred food choices, to generate an optimal diet and exercise regimen capable of reversing chronic illnesses and remove their dependency on drugs.</li></ul>
<div>Aditya Jyot Eye Hospital</div> <div>Research Intern</div> <div> May 2019 - Jul 2019  3 months</div>	<ul style="list-style-type: none"><li>Conducted research on the impact of diabetic retinopathy on the QoL of the patient and carer</li><li>Designed a research pipeline involving a self-built questionnaire vetted by ophthalmologists</li><li>Analyzed 115 data points collected from all over Mumbai using a <i>multi-regression model</i></li><li>Findings submitted to the Ministry of Health and Family Welfare, India</li></ul>
<div>TATA Power</div> <div>Digitization Intern</div> <div> Jun 2018 - Jul 2018  2 months</div>	<ul style="list-style-type: none"><li>Identified and classified faults in solar farms using thermal images taken by overflying UAVs</li><li>Designed a solution to monitor the health of certain plant equipment using sensor feedback</li><li>Used <i>Arduino UNO, ESP8266</i> and sensors to implement a prototype of the monitoring solution</li></ul>

EDUCATION

<div>Stanford Center for Professional Development, Stanford University</div> <div> Reinforcement Learning</div> <div> Jan 2023 - Apr 2023</div> <div><ul style="list-style-type: none"><li>Grade : A</li></ul></div>	
<div>Birla Institute of Technology &amp; Science, Pilani (BITS Pilani) - Goa Campus</div> <div> Master of Science, Economics</div> <div> 2017 - 2022</div> <div> Bachelor of Engineering, Computer Science</div> <div> 2017 - 2022</div> <div><ul style="list-style-type: none"><li>Computer Science Major GPA : 9.31 / 10</li><li>Overall GPA : 8.67 / 10</li></ul></div>	

PATENTS & PUBLICATIONS

Patents

- Agarwal, A.,** Kumar, S., Golla, S., Tanamala, S., Putha, P., Chilamkurthy, S., Warier, P. (2024). A System and Method for detecting large vessel occlusion (LVO) on a computational Tomography angiogram (CTA) automatically. *U.S. Patent 11967079*. Granted on 23rd Apr 2024. *India Patent 563364*. Granted on 25th Mar 2025

Publications

- Agarwal, A.,** Bharti, N., Ghosh, T., Golla, S., Bains, N.K., Chamadia, R., Robert, D., Putha, P., Qureshi, A.I. (2025). Development and internal validation of multimodal machine learning models for predicting eligibility for mechanical thrombectomy in suspected stroke patients using routinely collected clinical and imaging data. *PLOS One*, 20(10): e0334242. doi: 10.1371/journal.pone.0334242
